

Employee Spotlight

Joy King
Research Geneticist
Joined PIC in 2013

What was your career path prior to joining PIC?

I am originally from China and I studied Animal Science in college. PIC actually was introduced to me in college as the biggest pig company in my swine science textbook (in Chinese of course). Then I came to the U.S. for graduate school for deeper insight of Genetics and Breeding. While I was in UGA pursuing a PhD, Selma Forni (a former employee) was visiting and became one of my committee members. At first she introduced an internship opportunity to me, then asked if I would like to join PIC after graduated. I was so excited to accept the offer and said YES immediately!

What made you want to work at PIC?

Being an intern here helped a lot. Also, I am so fascinated by how quickly we apply the latest technology and how well people work around here with each other. It truly is a big family here, where everyone cares about the company and each other personally. I can always get the resources that I need.

What would you tell someone who is currently in school or working for an ag-based company and is interested in working at PIC?

There are good, better and best companies. PIC is definitely the best of the best company to work for. I highly encourage students to have an internship here and try working with the amazing people here; they will know the difference. Especially in terms of science, PIC has such a strong team for R&D and works with the most brilliant professors and researchers around the globe. There is no doubt here about moving forward on improving pigs and providing the best pork to world.

“I am so fascinated by how quickly we apply the latest technology and how well people work around here with each other. It truly is a big family here.”
